

**1 Upravte výraz.**

$$\frac{(x+3)}{3} - \frac{x}{4} - 1 =$$

---

---

**1 Upravte výraz.**

$$\begin{aligned} \frac{(x+3)}{3} - \frac{x}{4} - 1 &= \\ &= \frac{4 \cdot (x+3) - 3x - 12}{12} = \frac{4x + 12 - 3x - 12}{12} = \\ &= \frac{x}{12} \end{aligned}$$
